

## Summary of the Collection Analysis for the Friess Lake School Library

In general, the Friess Lake School Library Collection Analysis is excellent. The average age of the collection is 1997, fourteen years; the benchmark would be 11 years. The balance of the collection is also excellent; two comparisons for balance are represented on pp. 9-12 (Follett and Wilson).

To improve the collection, I would take the following steps:

- Continue to weed old material, and replace with new, updated material.
- Analyze the age sensitive areas listed on p.15. I would evaluate the areas to be addressed with consideration of curriculum needs and patron use, as well as copyright.
